

How many coal-fired power plants are there in the world today?

The EU has 468 - building 27 more... Total of 495

Turkey has 56 - building 93 more... Total 149

South Africa has 79 - building 24 more... Total 103

India has 589 - building 446 more... Total 1035

The Philippines has 19 - building 60 more... Total 79

South Korea has 58 - building 26 more... Total of 84

Japan has 90 - building 45 more... Total 135

China has 2,363 - **building 1,171 more...** Total = 3,534

That's 5,615 projected coal-powered plants in just 8 countries.

USA has 15 - building 0 more...Total = 15

And Democrat politicians with their "green new deal" want to brainwash us and shut down those 15 plants in order to "save" the planet.

This makes the point. Whatever the USA does or doesn't do won't make a Tinker's Damn regarding CO2 unless the rest of the world, especially China and India reduce their coal-fired power plants as well.

The "global warming" and "climate change" gambits promoted by this Administration are to create a *supposedly* sound, scientific basis to justify a federal government power-grab and the passage of MORE laws to increase energy prices, taxes and increased control of the privately-owned power industry and its distribution. Never forget the *main* motivation they have!

"SAVE the planet!!"

WAKE UP AMERICA !!!! We are being played over and over again !!!
